#### SCULL AND ROW

Read these instructions carefully and follow them to ensure correct use.

#### Equipment needed :

Screw  
x1

Wedge  
x1

Handle and ring x1

### ASSEMBLY OF THE HANDLE

For the choice of wedge and screw, refer to the rowing length adjustment tables

**1** Insert the lag screw into the wedge.

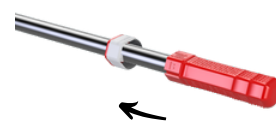

**2** screw the wedge into the tube until it is tight.

**3** Insert the ring into the tube, green or red color first.

**4** Select one of the three possible handle positions by placing the desired notch opposite the visible groove on the tube.

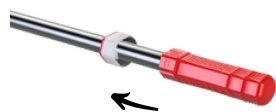

**5** Hold the position and insert the handle on the tube with the upper side visible when the oar is squared (the upper side is the one containing the handle size) Push the ring back onto the handle.

**6** That's it. It's up to you to row !

### DISASSEMBLY OF THE HANDLE

**1** Push the ring back onto the tube as for the assembly.

**2** Unscrew the handle clockwise for starboard and counterclockwise for port.

**3** Remove the ring. Turn the wedge a quarter turn.

**4** Remove the shim. Possibility of positioning a shim of a different size.
